Target version:	4.6		

Description

I need a API to get the ps3 Id or Mac address, it used to identify the user, so I can store some info as, play history, user Id on server side. But now, there is not any way to identify the ps3 or user. Will this feature be supported?

Some kind of machine id would be useful. I agree with that.

Ok, the showtime property now have something called a deviceId which should be unique for every device (it's a hash based on various things)

```
showtime.print(showtime.deviceId);
```

Remember that your plugin must check for version 4.5.369 before depending on this property (either by a hard dependency in the plugin.json file or you could check that in runtime, like this:

```
if (showtime.currentVersionInt >= 40500369) {  
  showtime.print(showtime.deviceId);  
}
```
