Description

How about the ability to play all files within a folder (music is my most resent want for this feature but i can see this useful for videos and pictures). The feature should "play" all files within the selected folder including files within multiple folders ex: folder AC/dc, in there are folders of many albums containing the music files from the group.

History

As it is, my only option once selecting a folder is to bookmark a folder, that is where the " play all files " option should also be.
