Just checked the mediainfo and it is to do with the ReFrame number.

The null.mp4 has:

Format settings, ReFrames : 1 frame

To get it to play correctly you have re encode it and up the ReFrame to 3 (I set mine to 3). I had the same problem with youtube videos too. But I looked into how Showtime plays mp4 files it was always the ReFrame number that affected playback. ReFrame value of 1 played the audio fine but the video looked like it was on fastforward.

It can get a bit time consuming to keep re-encoding files but that is the quick fix at the moment.
