Category:	General		**Estimated time:**	0.00 hour
Target version:				

Description

buttons on remote control should be more durable.

left/right arrow should be seek back/forward 90 seconds.
down/up should be seek back/forward by 10 minutes
square should be instant repeat of last 15 seconds.

this would stop having to hit triangle to go to the gui all the time, and some formats don't like "scanning" through the format.

I also would like to have the same function for L1/R1 as the PS3 native player when playing BD/AVCHD. That's chapter back/forword. If no chapter is supported, I think it can be set to seek back/forword 5 mins.

We should also be able to activate chapter selection GUI directly with the SQUARE [] button on the controller (this is similar to default PS3 player).

Optional suggestions:
L2 = Audio track selection
R2 = subtitle selection

These suggestions will make it possible to control video playback quickly without needing to access the GUI all the time with TRIANGLE /_\

Or the best option is to add a customizable controller layout, as in like with the keymapper, where you can set your preferred buttons and functions. That way we can edit each button for a specific function, and maybe add the ability for button combinations. Now that would be a really sweet feature.
